* More information on website.

Similar Symptoms with Different Treatments

Flu A & B	Mild Symptoms Take adequate rest and drink plenty of water	>	Serious / Persistent Symptoms Seek medical advice promptly (Take doctor-prescribed antibiotics if complicated by bacterial infection)	High-Risk Groups for Flu Complications (incl. children, ages 50+ and chronically ill patients) Take antiviral medicines prescribed by doctors in the first 48 hours of flu-like symptoms.
	No/Mild Symptoms Home quarantine or enter isolation facilities	>	Serious Symptoms Hospitalized for treatments	
COVID-19				

Instruction

How-to-use Video

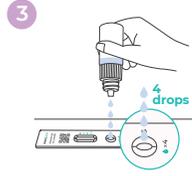

Gently insert the swab **2cm into each of your nostril**, rub the swab against the wall of your nostrils at least **4 times** in a large circular path.

Stir the swab into the buffer solution **20 times**.

! Tilt the vial to ensure the swab tip is fully submerged in the solution.

Drip **4 drops** of the solution into the oval opening of the test device.

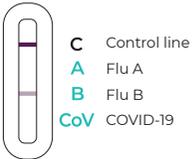

! Place the test device on a **flat surface** until the test is completed.

Wait **15 minutes** for the result.

! **NOT** to read the results after **20 mins**; otherwise, the result will be considered as invalid.

Result Interpretations

INVALID No 'C' Line	NEGATIVE 'C' Line Only	POSITIVE 'C' Line AND any 'A', 'B', or 'CoV' Line
<p>C Control line A Flu A B Flu B CoV COVID-19</p>	<p>C Control line A Flu A B Flu B CoV COVID-19</p>	<p>Flu A Positive Flu B Positive COVID-19 Positive</p>
<p>STOP If no 'C' line is seen, the test result is INVALID even if you see 'A', 'B', or 'CoV' line(s).</p>		<p>Flu A & COVID-19 Positive Flu B & COVID-19 Positive</p> <p>! Look very closely! Even a very faint line next to the 'A', 'B', or 'CoV' should be considered positive if there is also a 'C' line.</p>
